Other: AWS EC2, Apache, BCrypt, Cors, MaterialUI, Spring, Github, Bash, Postman, MAMP, Bootstrap, Adobe Suite, Multer, Mongoose,

TECHNICAL PROJECTS

HomeComing Live

2021

A text based Star Wars game, written in Python, Django, and SQLite, with a robust backend.

- Collaborated on a team of three and coordinated planning, creating wireframes, and group discussions in order to increase overall productivity on the project, and delivered within a 4 day time frame.
- Designed a responsive, clean front-end interface using CSS, and JQuery to create a more seamless user environment. Integrated and implemented a lightweight SQLite database using Django.
- Optimized security, and user data by integrating Bcrypt. Validated code using *W3 Code Validator* to ensure it functioned at its maximum potential.

Event Planner

2021

An event planning application, with built in dynamic Google Maps API

- Led a team of three engineers remotely via Github tools including facilitating discovery and planning meetings, designing code architecture, producing wireframe and journey maps, and testing to deliver a functional MVP in 7 days.
- Enriched UX with CSS, HTML, JavaScript to create a customer messaging feature similar to *Facebook's*, and integrated a third party GoogleMaps API with JQuery to enable geolocation and increase user engagement.
- Maximized user data and application security with JavaBcrypt and optimized load time by testing and validating applications with W3 Code Validator.

PROFESSIONAL EXPERIENCE

Banker - Washington Federal Bank

Boise, ID | 2020-2021

Realtor - Epic Realty

Boise, ID | 2019-2020
